Soil Remediation

Manchester, NH Airport Tank Removal Project

Project Highlights

- **One pump dispensing island**
- **One 8,000 gallon gasoline tank**
- **Excavation, T&D of 300 cubic yards of oil/gasoline impacted soils**

Summary of project

TRIDENT Environmental Group, LLC removed two 8,000 gallon underground storage tanks at the maintenance building of the Manchester airport in Manchester, New Hampshire. We also closed the dispensing island as part of the closure of these tanks. 300 cubic yards of gasoline and diesel impacted soils were excavated, transported and disposed of as part of the project. The excavation was then backfilled and compacted utilizing clean structural fill..
