Summary of project

TRIDENT Environmental Group, LLC assisted with the cleanup of beaches when 58,000 gallons of bunker fuel released from an accident. The fuel was released into the San Francisco Bay when the Cosco Busan collided with the Oakland Bridge. Nearly 40 miles of coast line within San Francisco bay were affected by the oil spill.

Project approach for oil spill

TRIDENT provided labor assistance for the bulk oil cleanup along several beaches, which were closed due to the oil spill. TRIDENT assisted with boom deployment, bulk fuel collection within the sand and the cleanup of oil contaminated rocks along the coastline of the San Francisco Bay.
